Scrollable ResultSet

A scrollable ResultSet is one which allows us to retrieve the data in forward direction as well as backward direction but no update allowed in order to make the non-scrollable resultSet as scrollable resultSet, we must use the following create statement which is present in connection interface.

Diff bw ResultSet and Scrollable ResultSet?

 //Refer to JdbcExample/ScrollableResultSet

ResultSet: we can move only in one direction(forward or up-to-down)

Scrollable ResultSet: we can move Bidirectional(up-to-down and down-to-up)
