Throw

try-catch is a mechanism which handle the exception and throw keyword convertspre-defined exception into user-defined exception.

Case:

Mainly the applications we are building in real-time industry,those applicationsare used by customers,there may be possibility our customers are from ITor NON-IT backgrounds.For NON-IT background customers we have to convertout pre-defined exception into user-defined exception.Such type of processwe can handle with throw keyword mainly we have seen in real-time projectscustomers are familier with user-defined exceptions as compared to server-sideexceptions or localRepository-side exception.
